FEMA Region 6 Weather Threat Briefing

Wednesday, May 23, 2018

Disclaimer: The purpose of this briefing is to provide a <u>Regional</u> weather threat assessment and is meant as a general overview. County/Parish decision makers should consult their local NWS forecast offices for the latest detailed, local weather information.

To find your local NWS forecast office, go to <u>www.weather.gov/srh</u>.

Key Points

Today

- A few strong to severe storms possible over E NM, the Panhandles and W TX this evening/tonight; damaging winds, hail and heavy rainfall are possible.
- Elevated to critical fire weather conditions in W NM this afternoon/evening

Thursday - Friday

• Elevated fire weather conditions possible across W NM on Thursday.

Saturday - Sunday

- Watching an area of low pressure which has a chance of developing somewhere in the central to eastern Gulf late this week
 - Regardless of development, areas of heavy rainfall/flash flooding will be possible beginning this weekend across the Central to East Gulf Coast, may be as far west as SE LA

Tropical Weather Outlook

- A broad surface low centered just east of Belize may gradually develop late this week while the system moves slowly into the central or eastern Gulf of Mexico
 - Formation chances in 48 hours...low...near 0 percent.
 - Formation chances in 5 days...medium...near 60 percent.

FEMA Region 6 Threat Matrix

May 23, 2018 - May 27, 2018

DAY / THREAT	WED	THU	FRI	SAT	SUN
Severe Storms	E NM, WTX, Panhandles				
Heavy Rain / Flash Flooding				SE LA	SE LA
Fire Weather	W NM	WNM			
Tropical Weather					
River Flooding					

No Weather Threats Expected

Very Common – Happens Often

Common – Happens Frequently

Uncommon – A Few Times a Year

Rare – Once Every 1-5 Years

Very Rare – Once Every 5-10 Years

*Threat levels are based on FEMA Region 6 criteria.

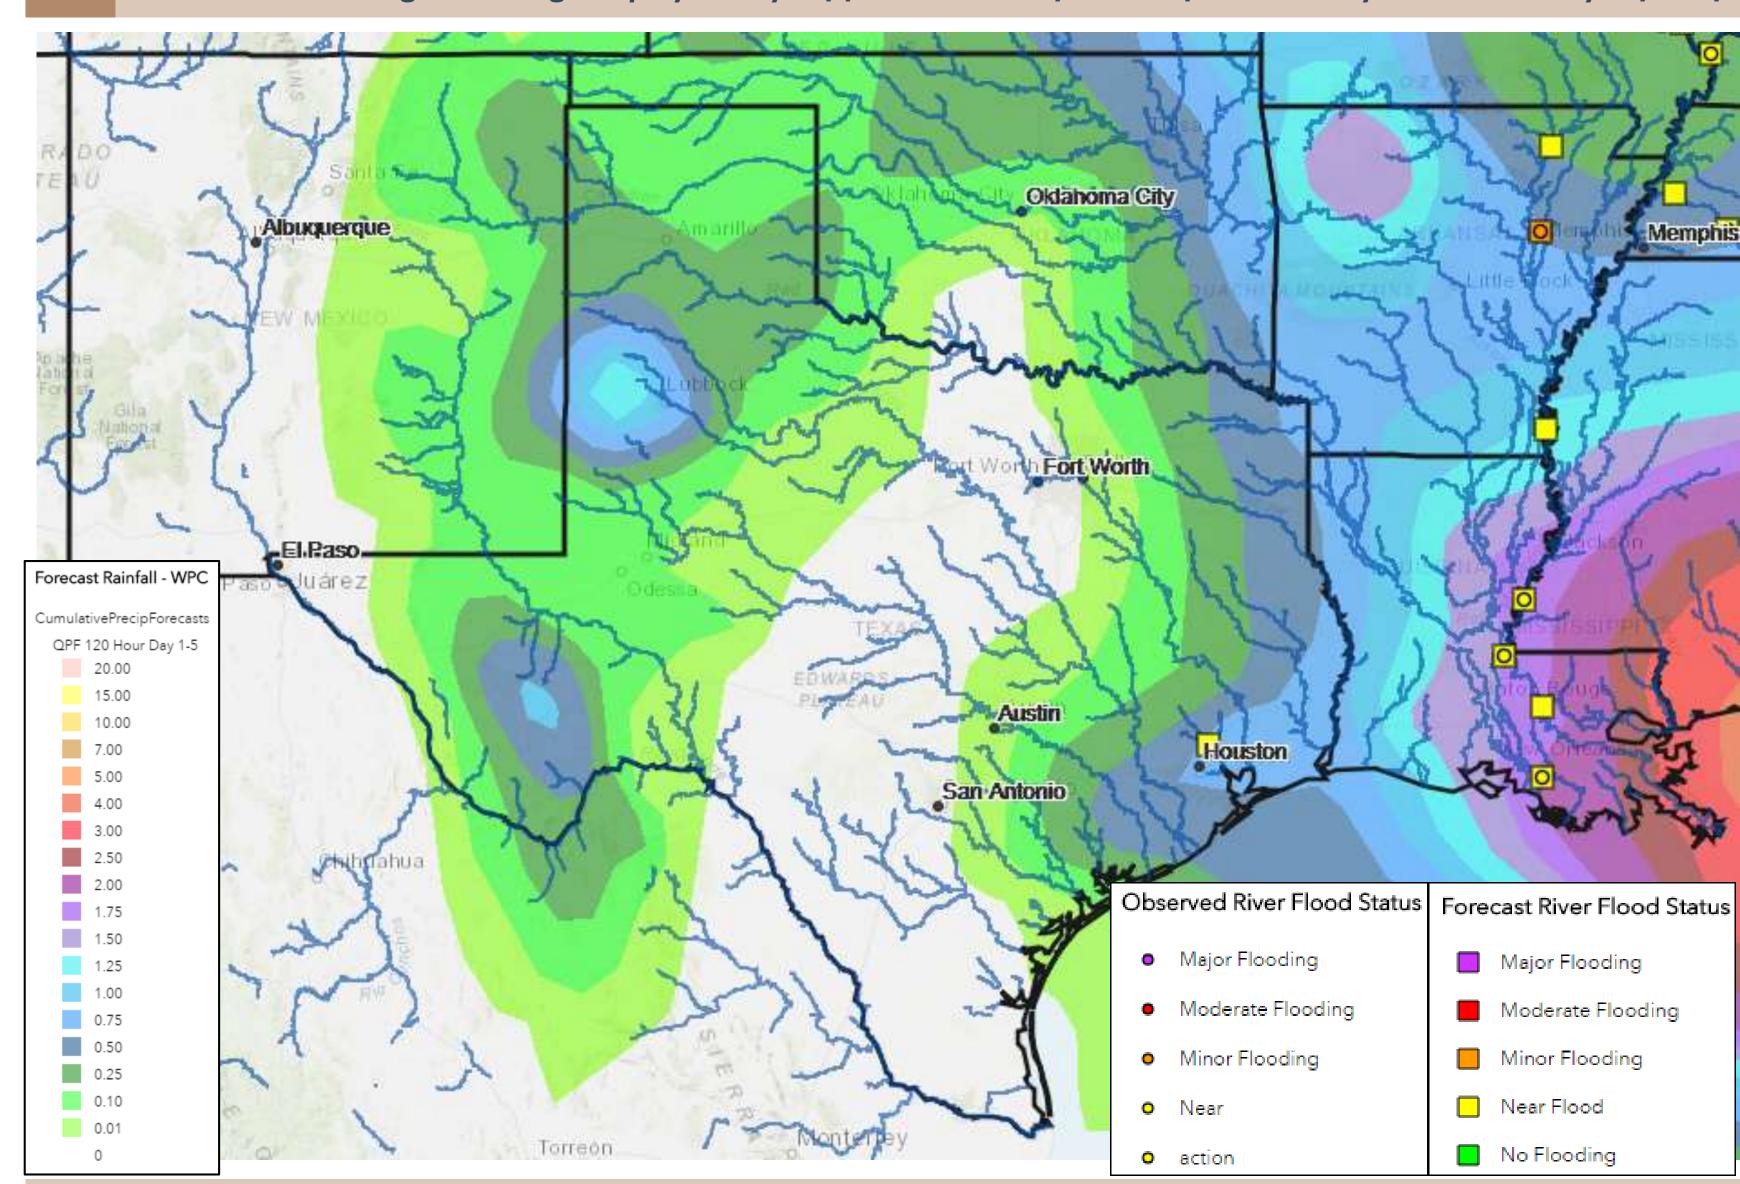

State or local threat level criteria may differ.*

For more details on the colors in the threat matrix refer to the last slide in this briefing.

5-Day Precipitation Forecast & River Flood Status

SR ROC
REGIONAL OPERATIONS CENTER

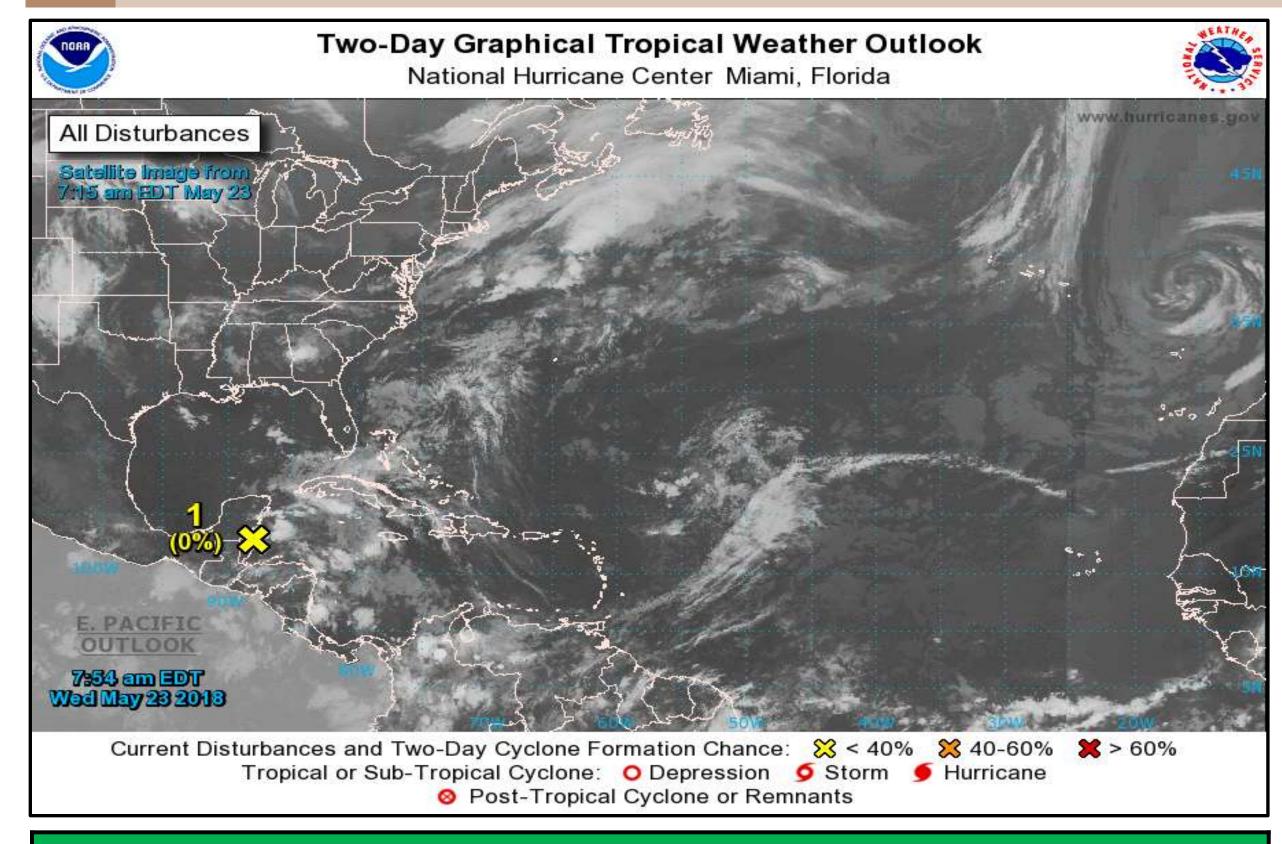

Note: Even though the image displays 5 days of forecasted rainfall, river forecasts only include 1-2 days of rainfall

Minor flooding from planned releases continues on the Cache River in AR.

Tropical Weather Outlook

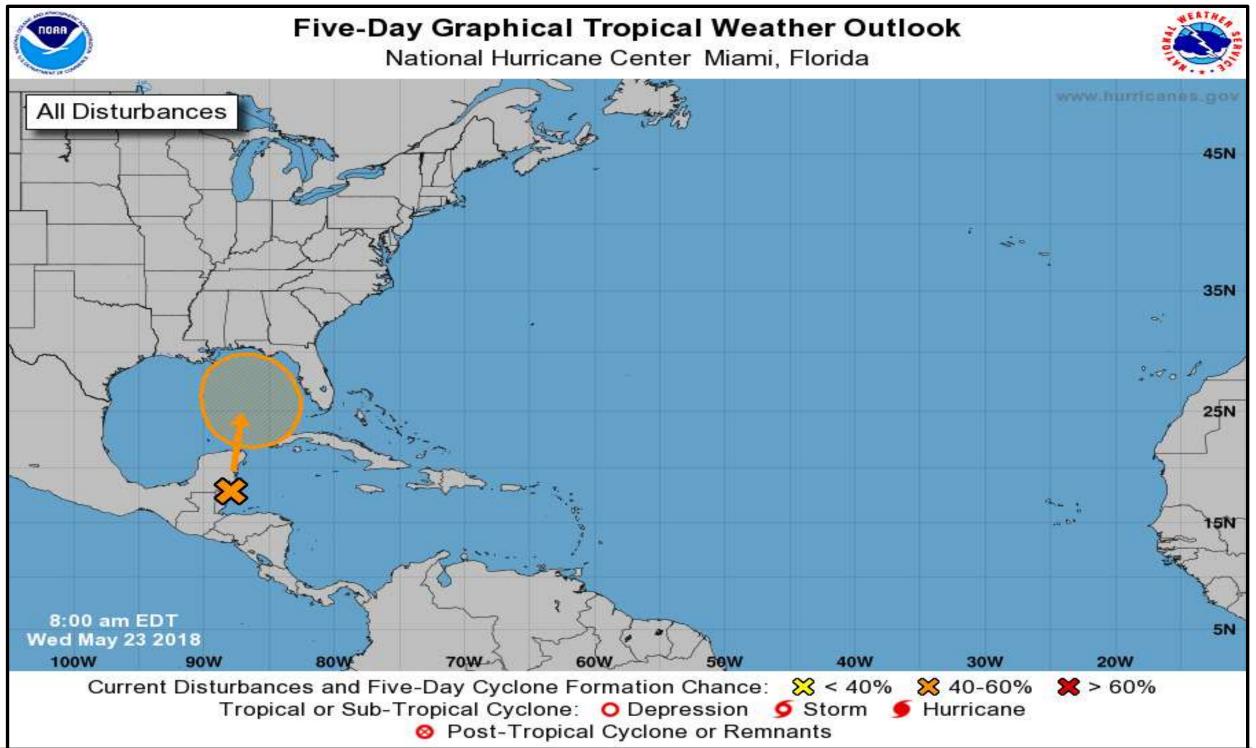

Potential impacts to FEMA Region 6:

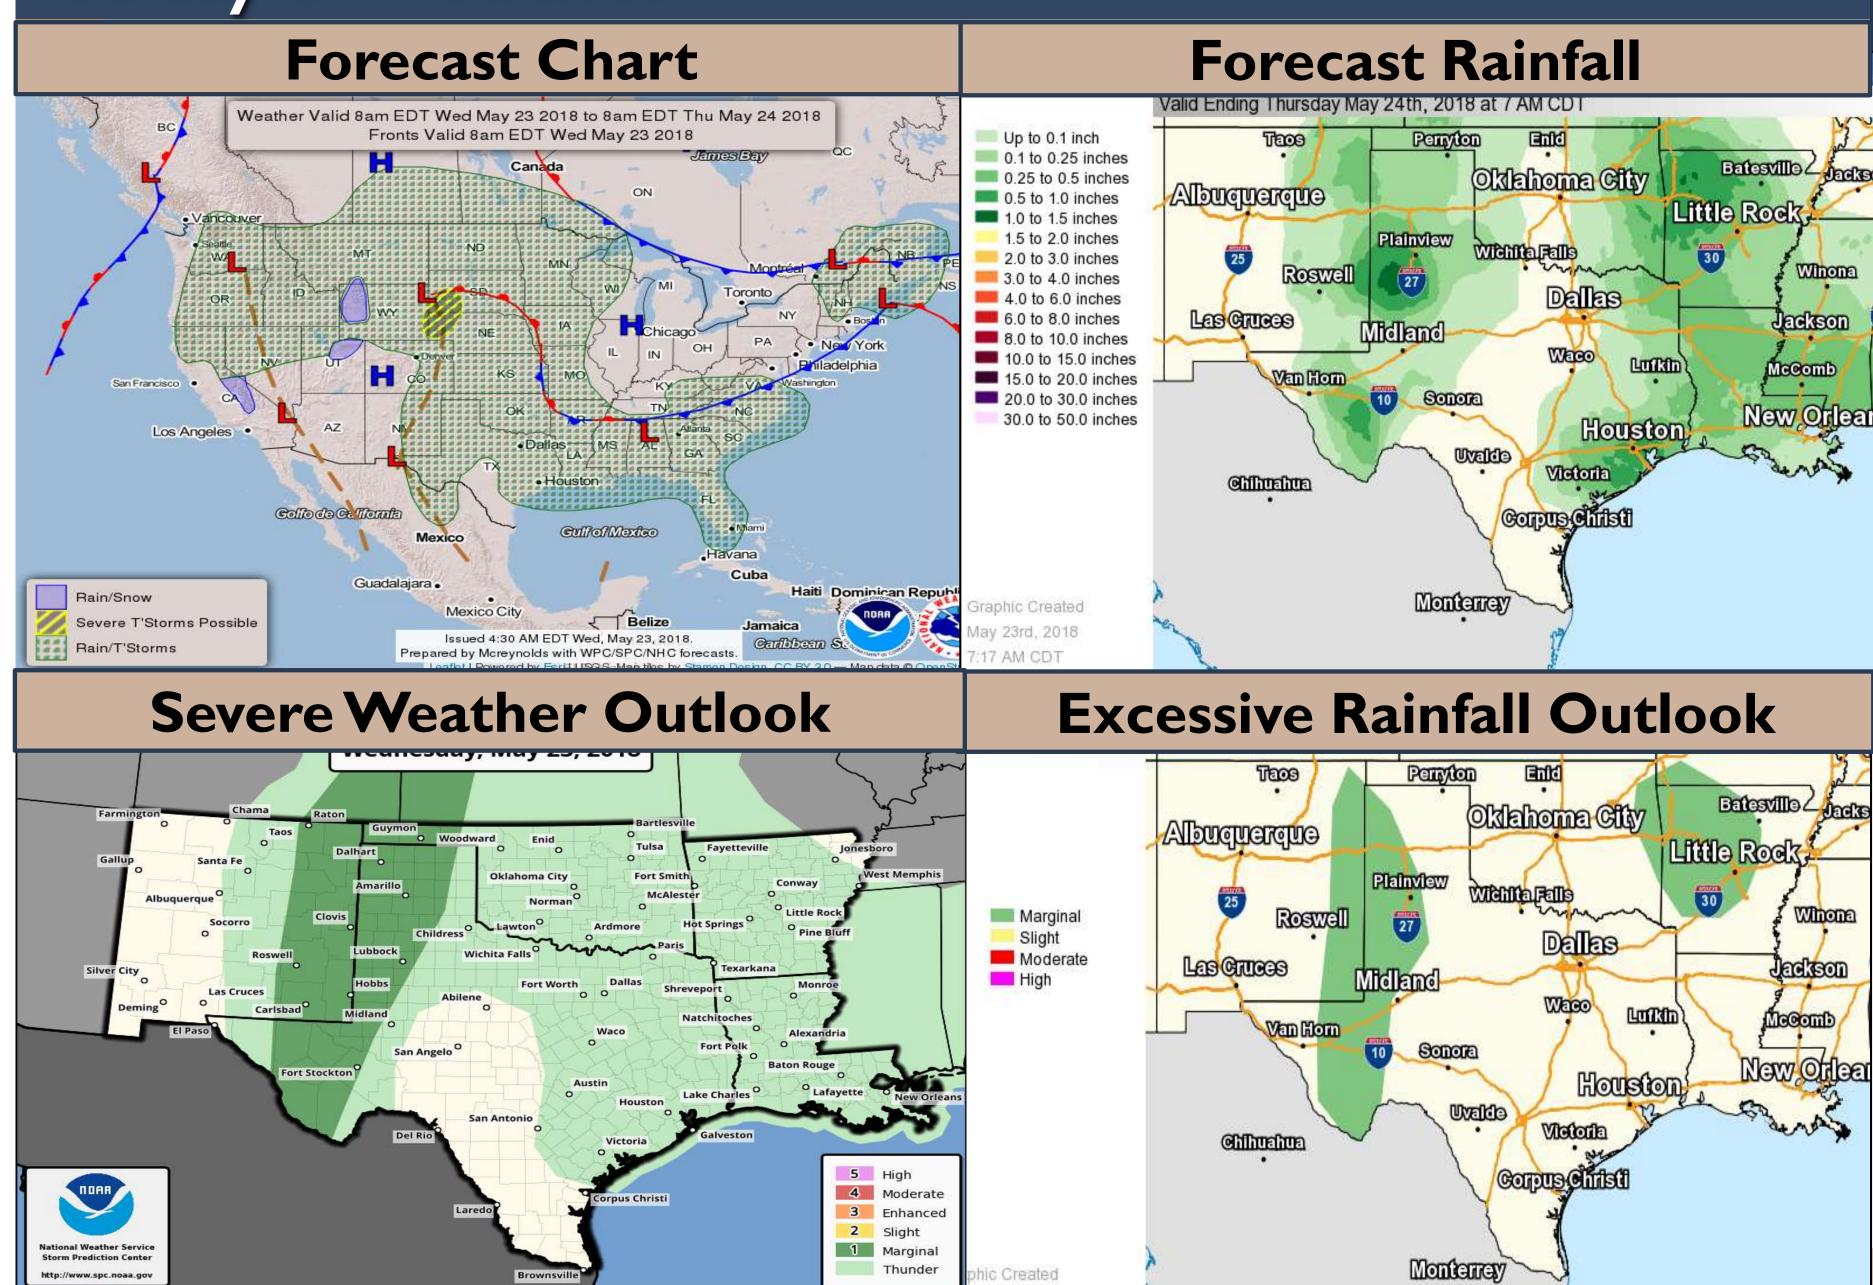

Regardless of development, locally heavy rainfall is possible from SE LA through the central Gulf Coast throughout much of Florida for the end of this week into the weekend.

A broad surface low centered just east of Belize is producing a large area of cloudiness and showers extending from the northwestern Caribbean Sea across Cuba and into the FL Peninsula. Little development is expected during the next couple of days, but gradual subtropical or tropical development is possible late this week while the system moves slowly into the central or eastern Gulf of Mexico.

Formation chance through 48 hours...low...near 0 percent. Formation chance through 5 days...medium...60 percent.

Today's Weather

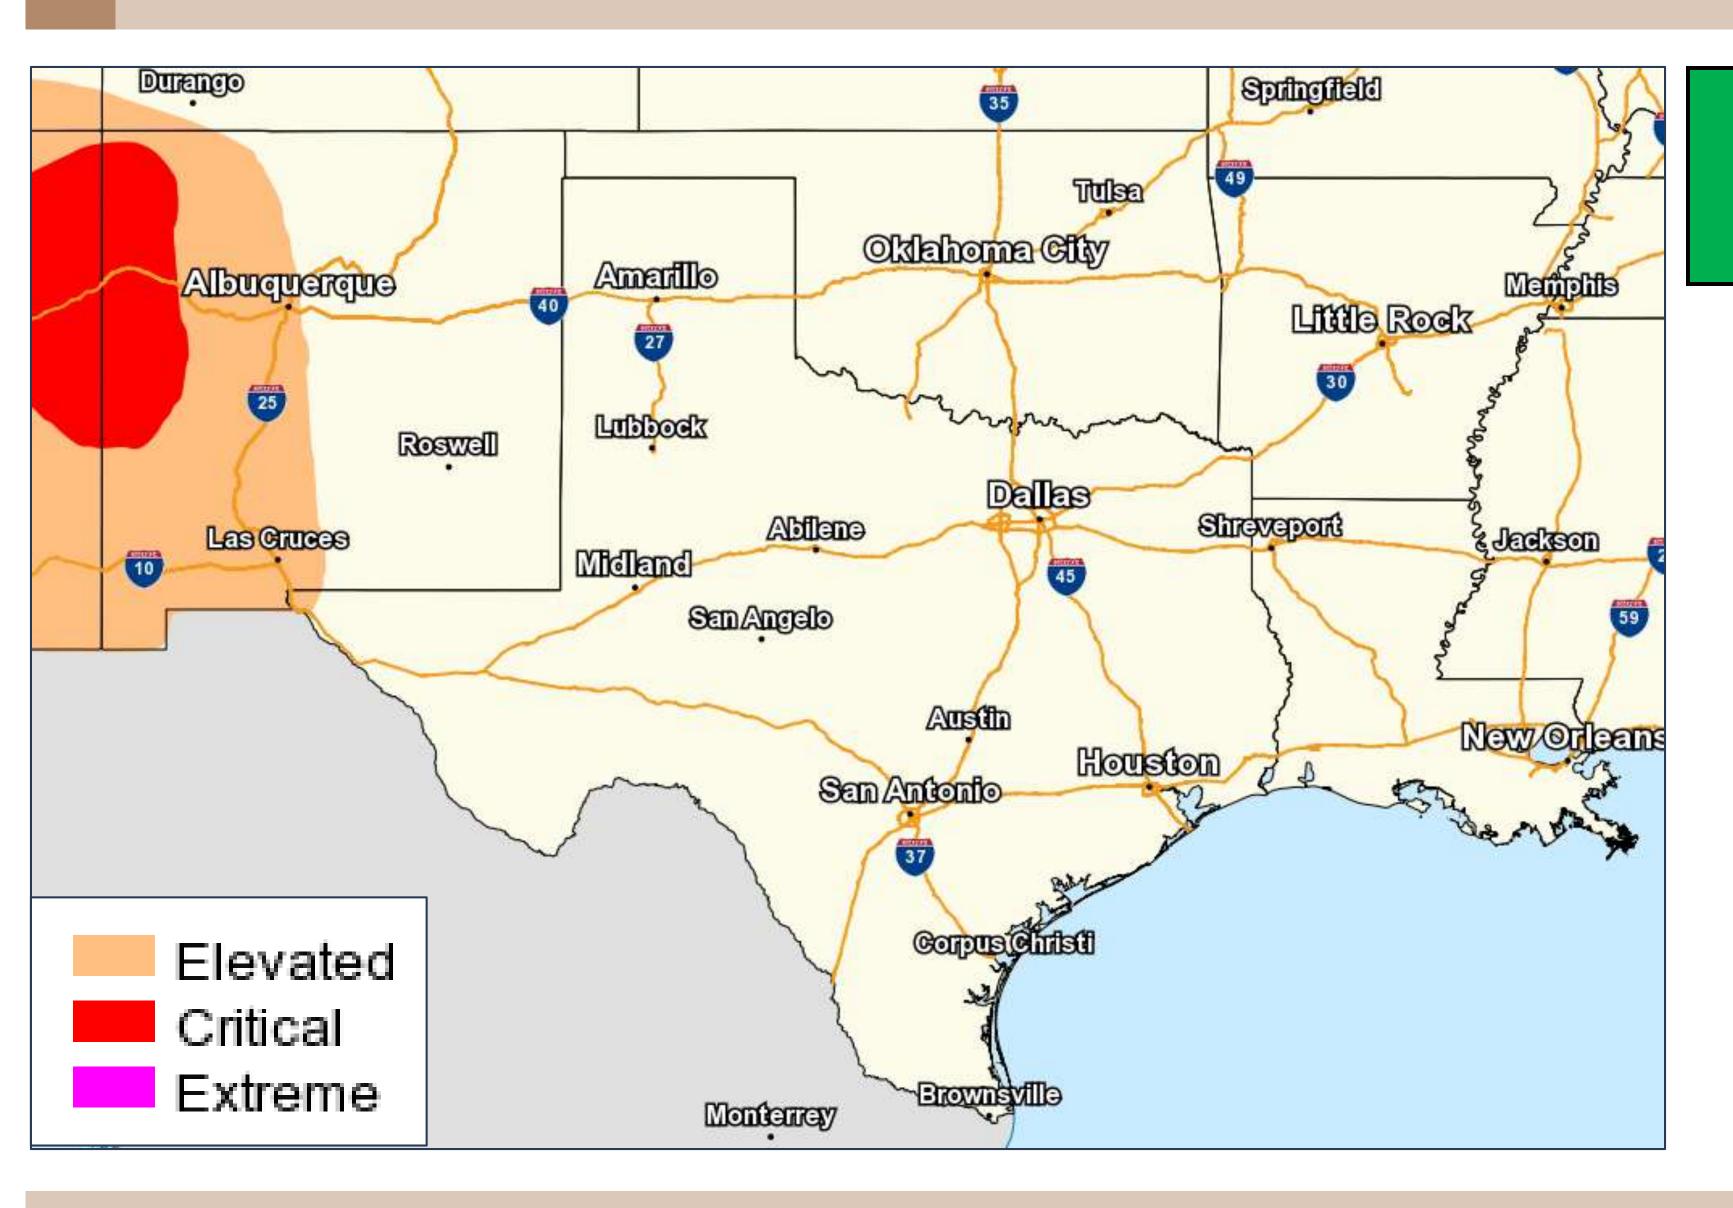

phic Created

A few strong to severe storms possible over E NM, the Panhandles and WTX this evening/tonight; damaging winds, hail and heavy rainfall are possible.

Today's Fire Weather Outlook

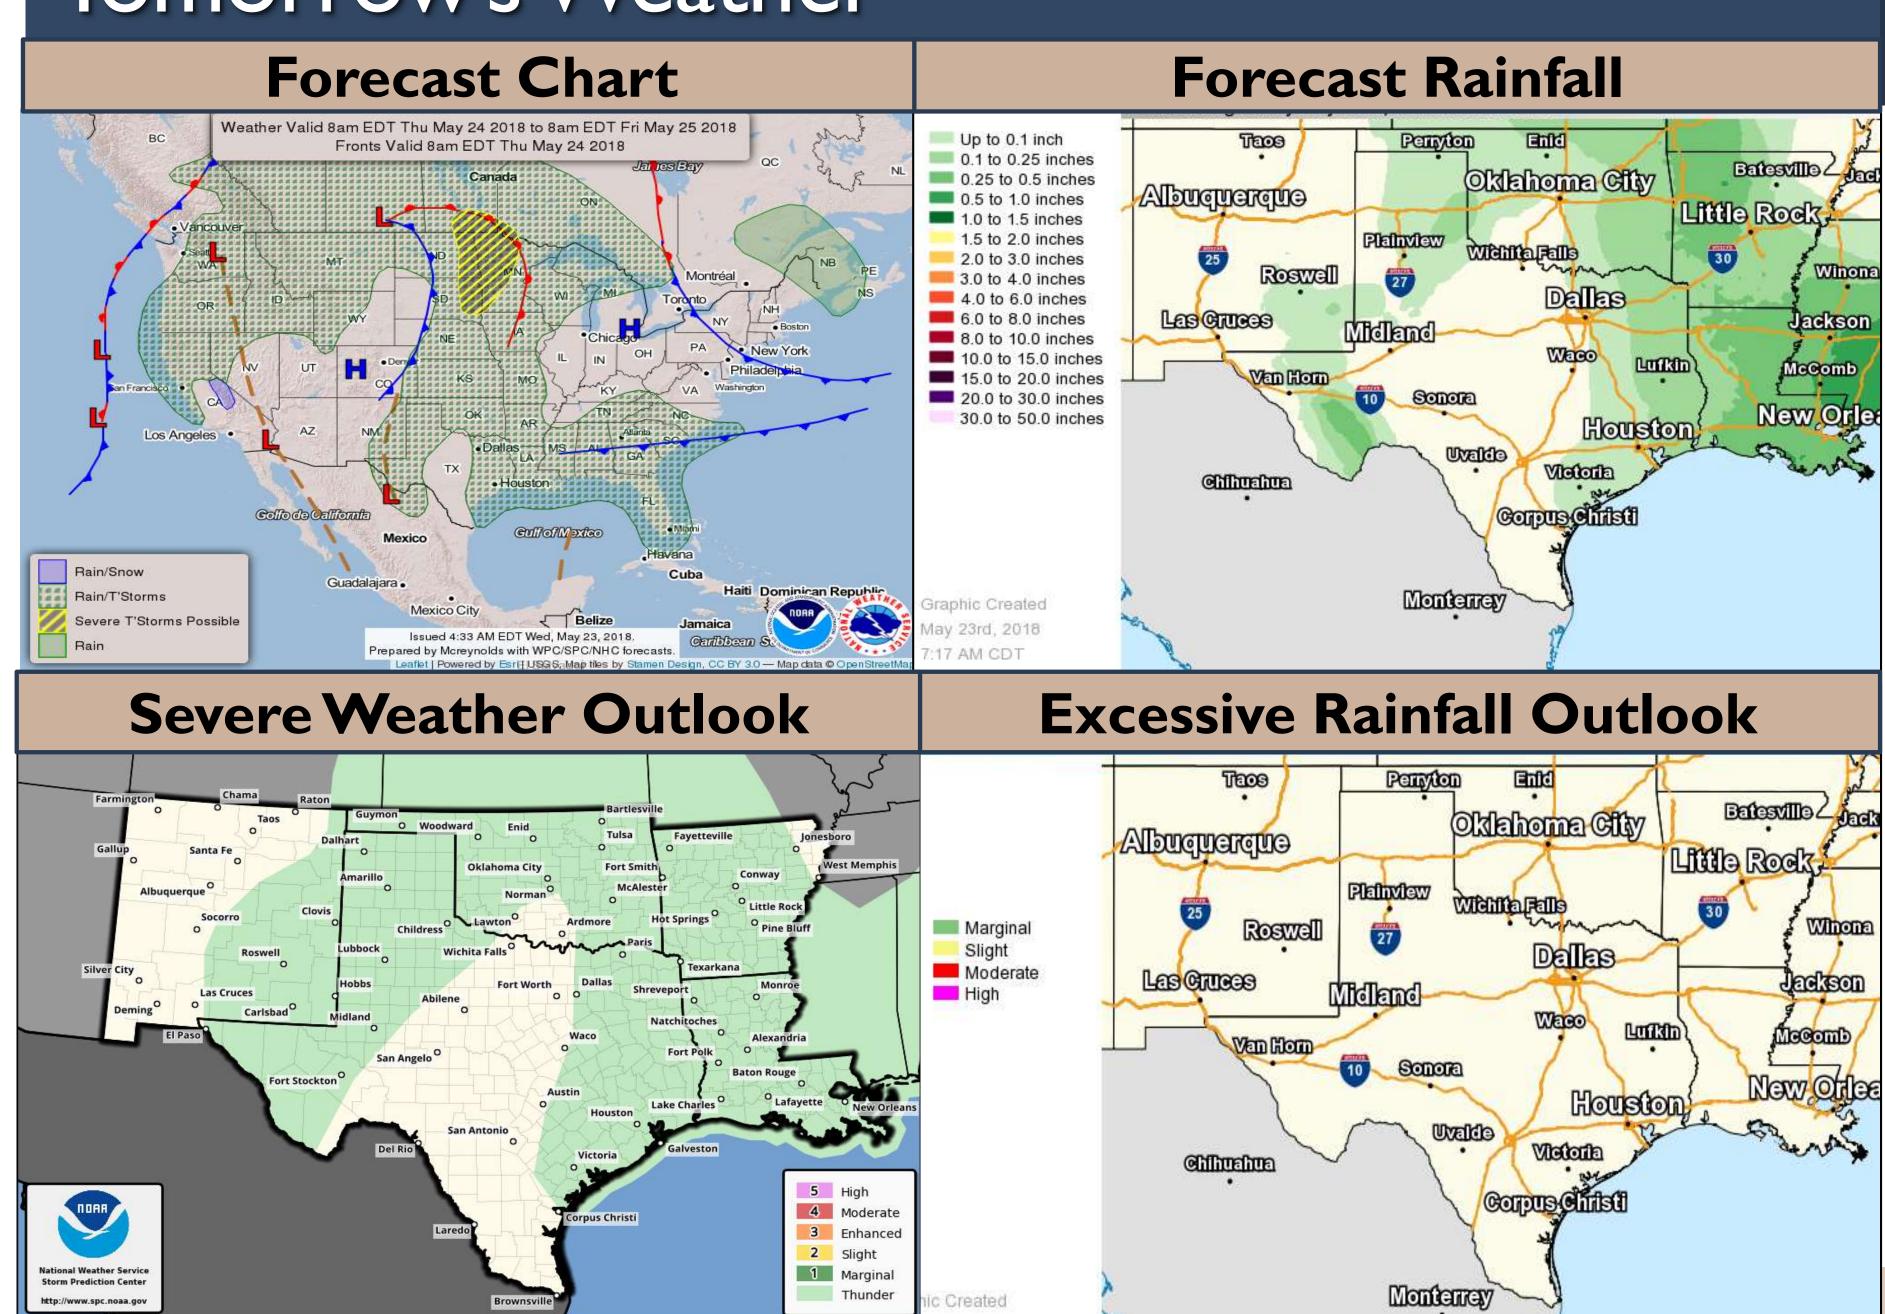

Elevated to critical fire weather conditions across W NM.

5/23/2018 7:23 AM www.weather.gov/srh

Tomorrow's Weather

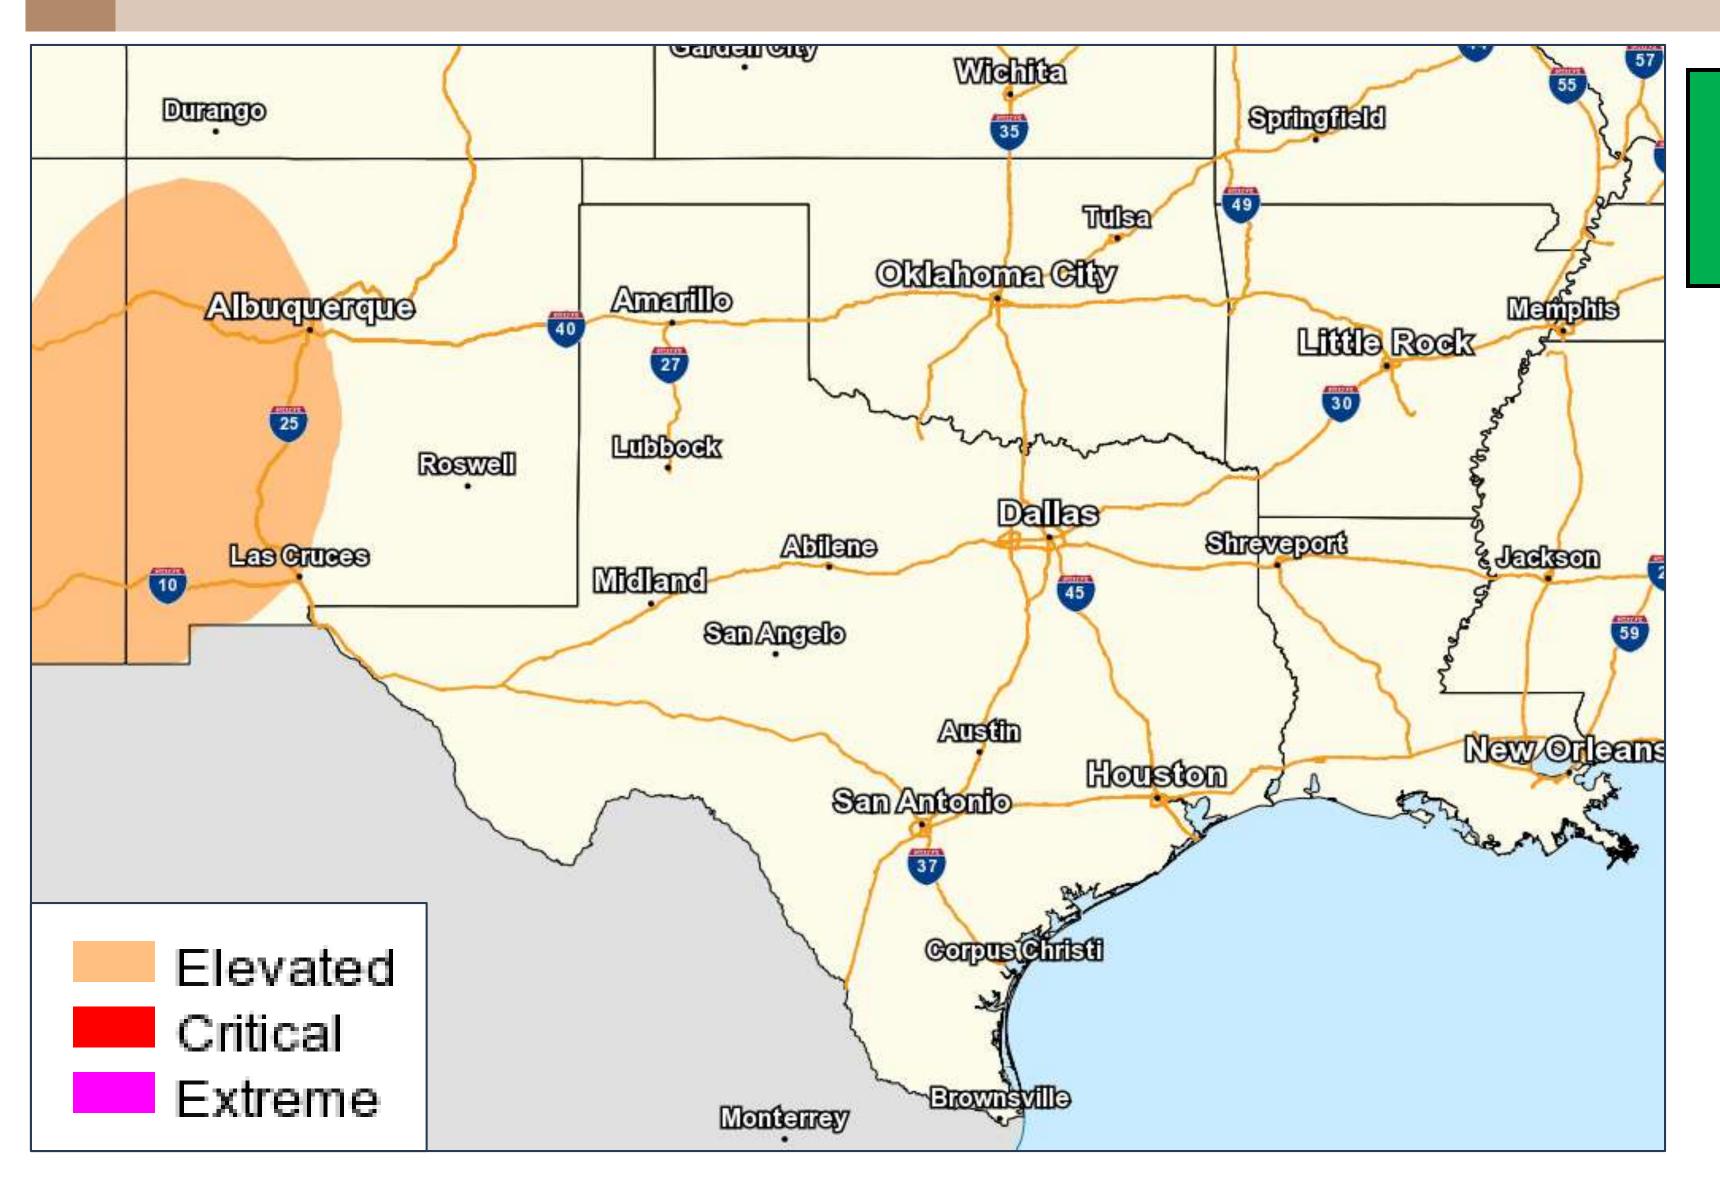

No significant weather impacts expected.

Tomorrow's Fire Weather Outlook

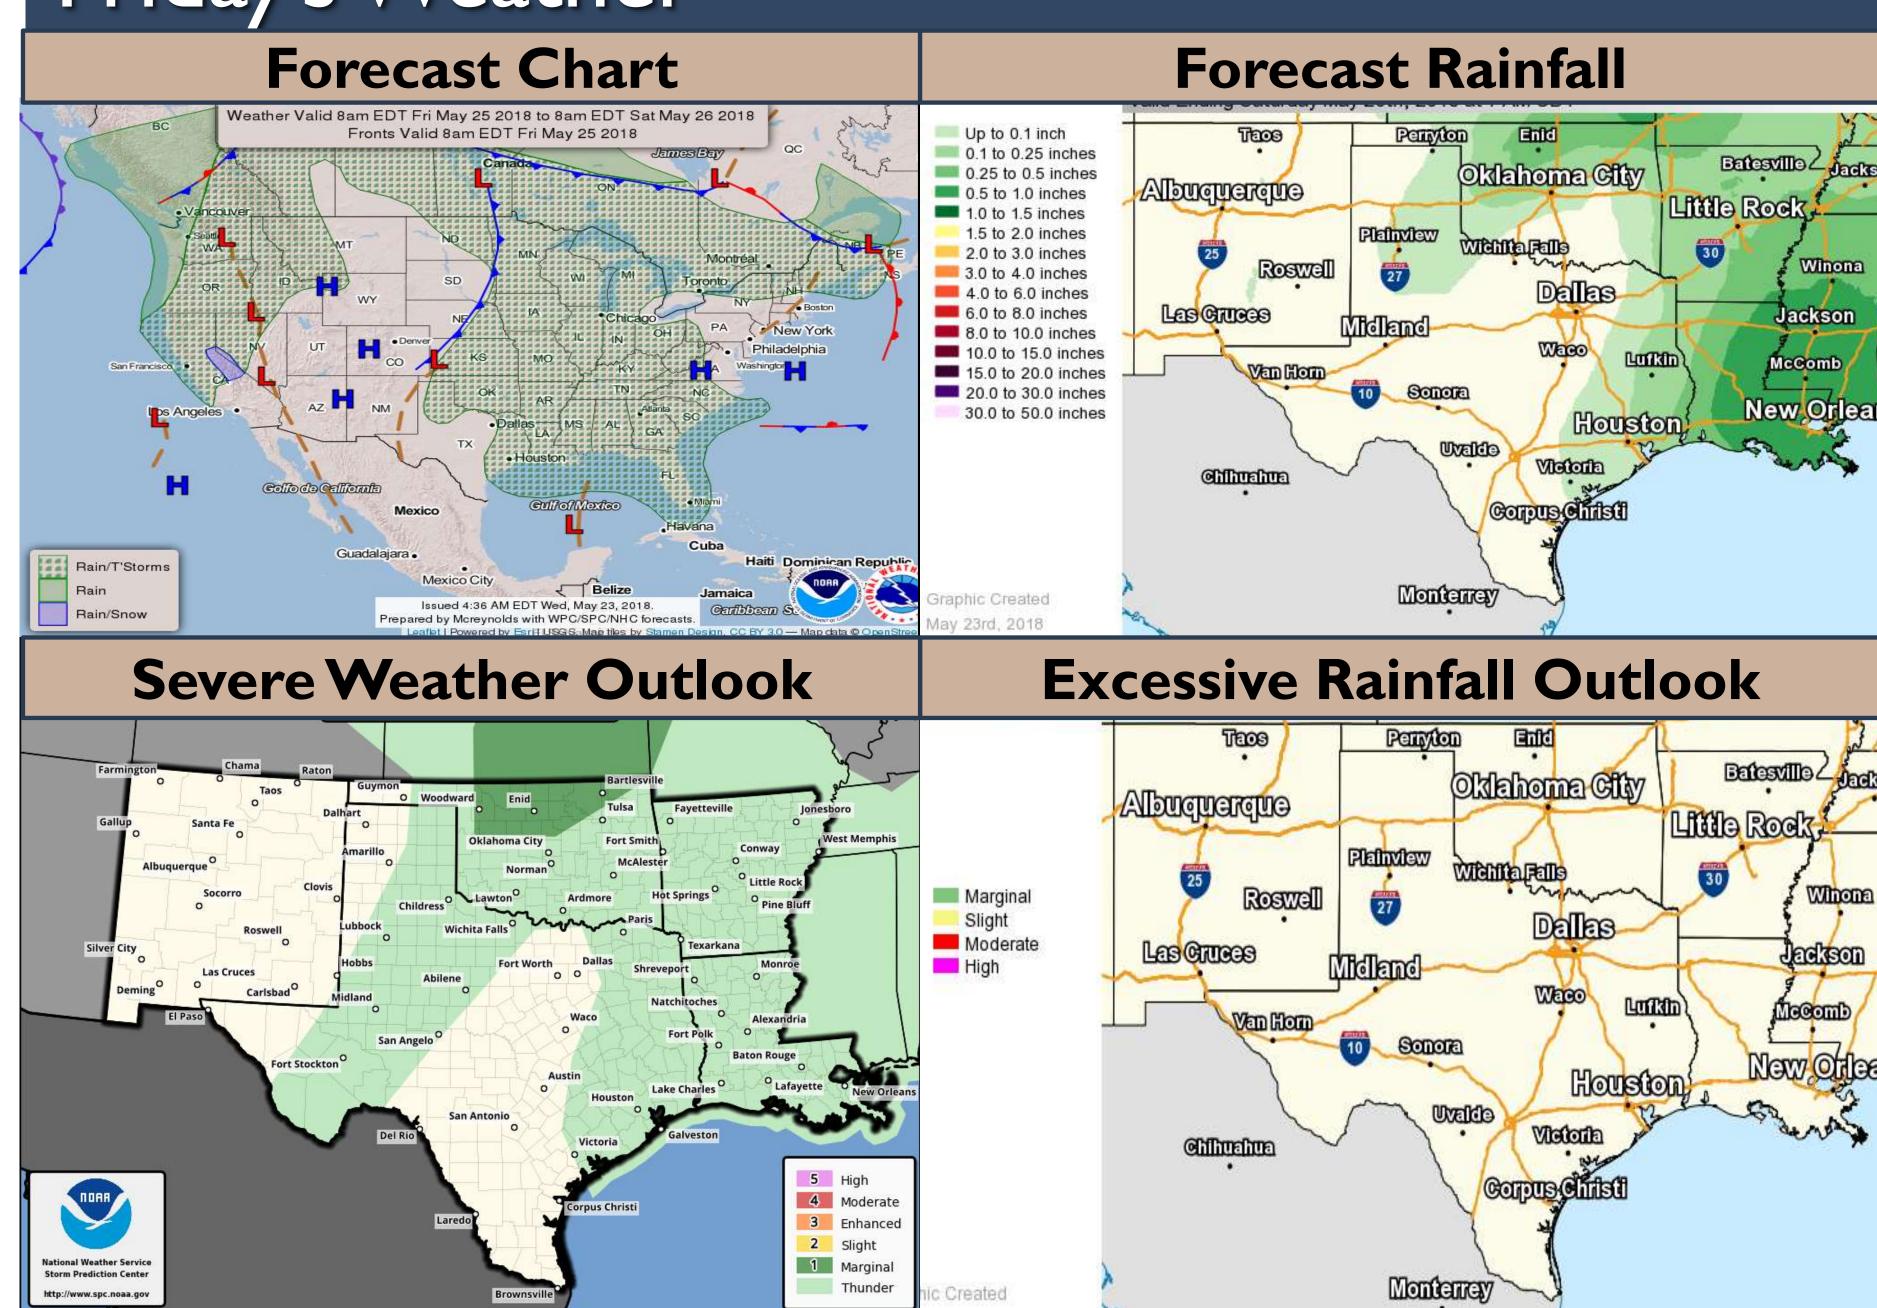

Elevated fire weather conditions across W NM.

5/23/2018 7:23 AM www.weather.gov/srh

Friday's Weather

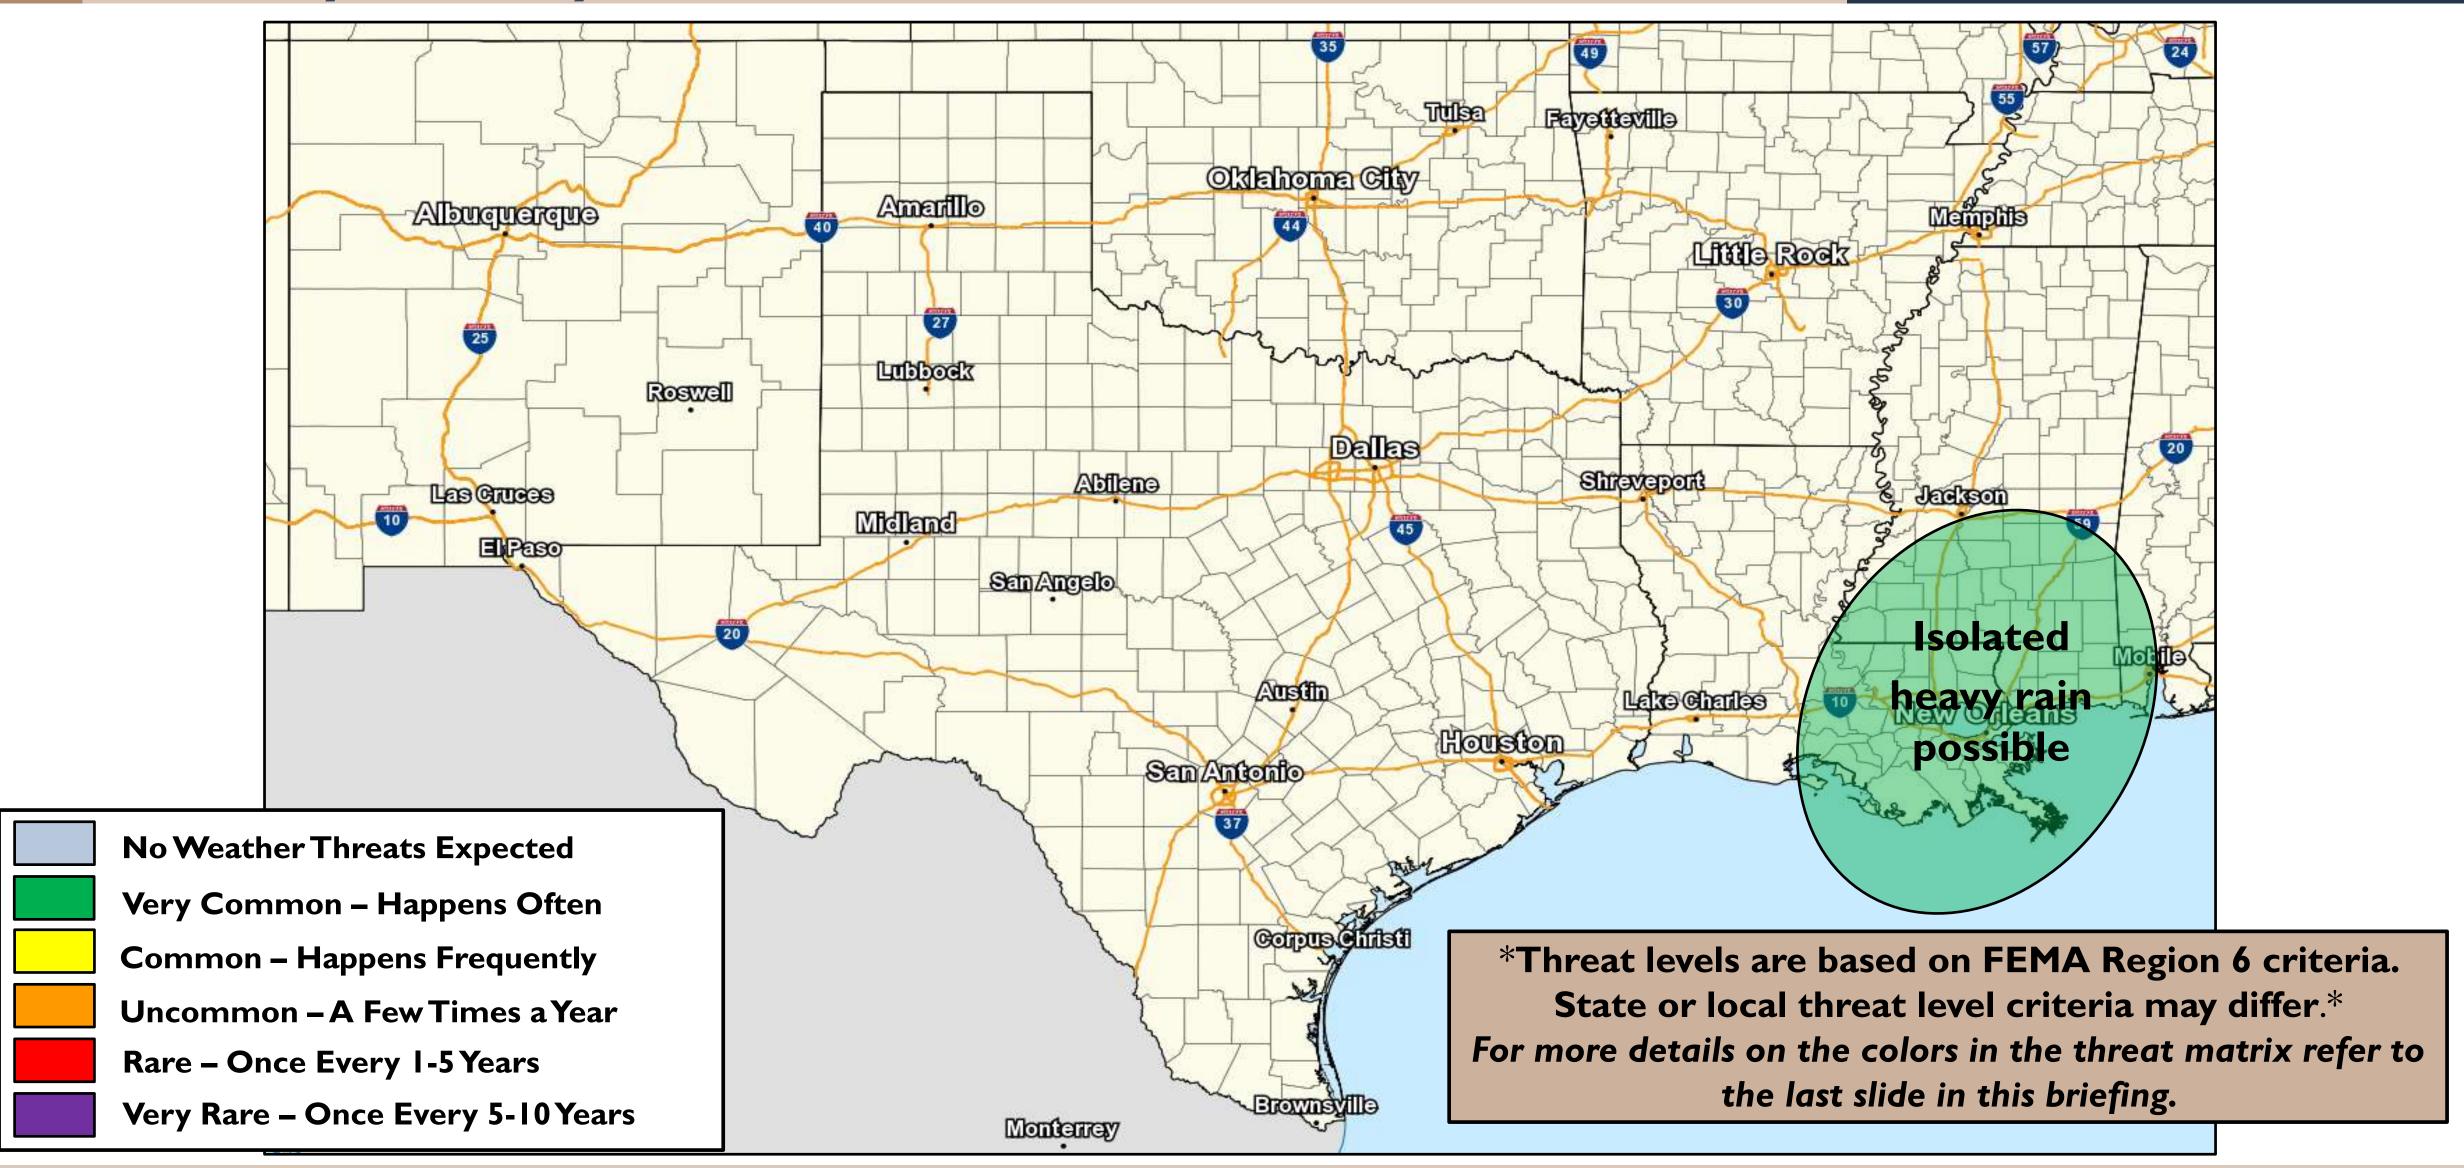

A few strong to severe storms over N OK Friday afternoon/evening; hail and damaging winds are the main threats.

Days 4-5 Weather Hazards

Saturday - Sunday

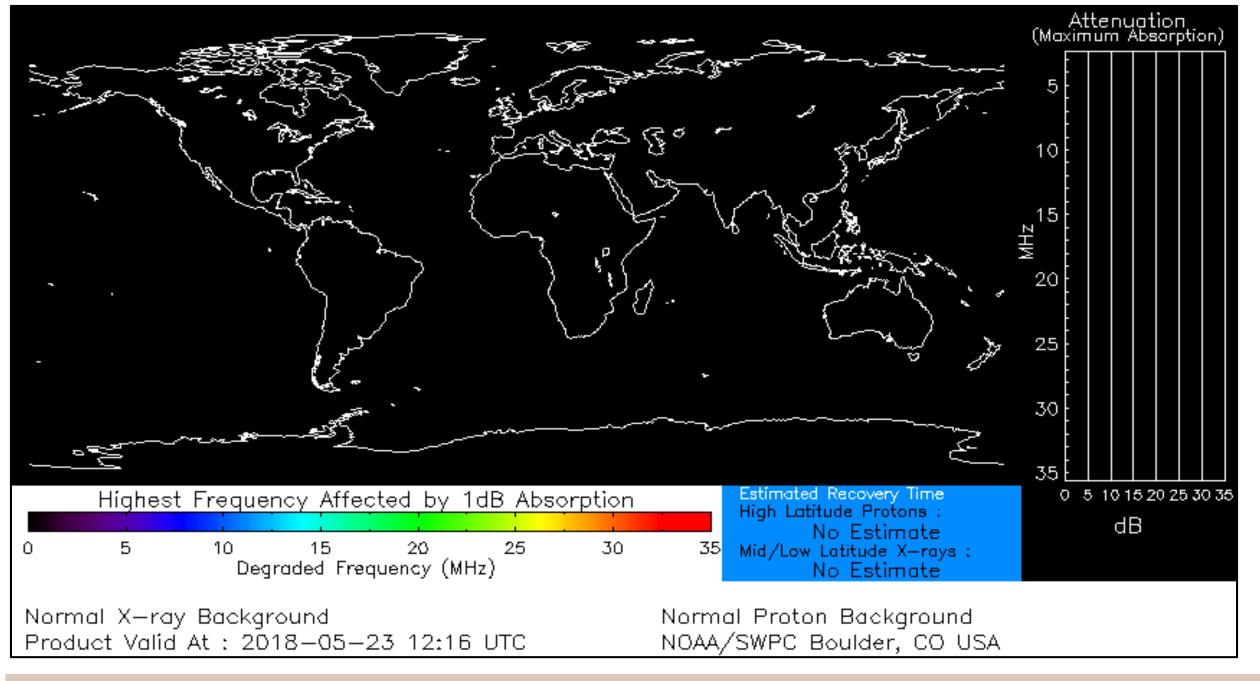

Space Weather 3-Day Forecast

	Wednesday	Thursday	Friday
Geomagnetic Storms	Unsettled to Active (Max Kp = 4)	Quiet to Unsettled (Max Kp = 3)	Quiet (Max Kp = 2)
Solar Radiation Storm (S1-S5)	1%	1%	1%
Radio Blackout (RI-R2)	1%	1%	1%
Radio Blackout (R3-R5)	1%	1%	1%

	Weather "Threat" Matrix							
Color	Definition	Criteria	Example(s)					
Green	Very Common Safety: Rarely a Direct Threat to Life and Property Impact Potential: Typically Results in Little Inconvenience to Daily Routines	Severe: Marginal Risk from SPC Flooding: Minor flooding expected over localized areas Tropical: None Fire Weather: No Watches/Warnings, fuel moisture above 10% or green up active	 Thunderstorms expected over LA this afternoon; a few may produce winds to knock down a few trees Something that happens almost every day in a particular season such as seabreeze storms in coastal TX 					
Yellow	Somewhat Common — Happens Frequently Safety: Rarely a Direct Threat to Life and Property Impact Potential: Typically Results in Some Inconvenience to Daily Life	Severe: Slight Risk from SPC Flooding: Nuisance flooded expected for a widespread area, or Minor flooding expected over isolated areas Tropical: A weak tropical wave expected to move towards or near any coastline Fire Weather: Red Flag Watches/Warnings and/or SPC outlines enhanced or critical fire outlook	 2-3 inches of rainfall expected over central AR today and tonight; some minor (brief) street flooding possible Scattered severe storms possible, one or two tornadoes expected, along with reports of strong winds/wind damage and ~1" hail 					
Orange	Uncommon — A Few Times a Year Safety: Often Threatening to Life and Property, Some Damage Unavoidable Impact Potential: Typically Results in Minor Disruption to Daily Life	Severe: Enhanced Risk from SPC Flooding: Minor flooding expected over a widespread area (including urban locations), or Moderate flooding expected over isolated areas Tropical: A Tropical Storm expected to move towards or near any coastline Fire: Critical fire outlook for more than 2 consecutive days, Warnings for 2 or more consecutive days, D3-D4 drought conditions	 A snow/sleet mix is expected to move through or near the DFW area tomorrow morning; travel impacts likely Numerous severe storms possible, a few tornadoes possible along with several reports of wind damage along with damaging hail Some large fires reported, burn bans advertised, critical conditions expected 					
Red	Rare — Once every 1-5 Years Safety: Extensive Property Damage Likely, Life Saving Actions Also will be Needed Impact Potential: Will likely result in Large Disruption to Daily Life	Severe: Moderate Risk from SPC Flooding: Moderate flooding expected over a widespread area (including urban locations) Tropical: A Hurricane expected to move towards or near any coastline Fire: Large areas of critical conditions for 2 or more days, Warnings for 3 or more days, Severe to extreme drought	 A Category 1 hurricane will be moving towards the NW Gulf in the next few days Widespread severe storms likely, strong tornadoes, widespread wind damage, and destructive hail Large fires ongoing throughout the area with critical fire weather conditions expected to continue 					
Purple	Very Rare – Once Every 5-10 Years Safety: Property Damage Unavoidable, Immediate Action to Save Life will be Needed Impact Potential: Typically Results in Long-Lived Widespread Major Disruption to Daily Life	Severe: High Risk from SPC Flooding: Major flooding expected over a widespread area (including urban locations) Tropical: A Major Hurricane (Cat3 or greater) expected to move towards or near any coastline Fire: Large area of critical conditions for 2 or more days, Warnings for 3 or more days, Long term (months) of severe to extreme drought	 A Category 4 hurricane is headed towards the SE LA; major storm surge, flooding and damaging winds anticipated to begin tomorrow Widespread severe storms expected, tornado outbreak probable with long-lived, very widespread and particularly intense storms 					

Criteria for the color codes in this briefing is to the left, please provide any feedback to
